

ABSTRACT OF THE DISCLOSURE

Compounds of formula (I) :

and medicinal products containing the same which are useful as dual  $\alpha_2/5-HT_{2c}$  antagonists.

**ABSTRACT OF THE DISCLOSURE**  
**NEW DIPHENYLUREA COMPOUNDS**

Compound of formula (I) :

wherein :

- a*
- ✓ R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub> and R<sub>4</sub> independently represent hydrogen, halogen, or alkyl, alkoxy, hydroxy, cyano, optionally substituted amino, nitro, carboxy, alkoxycarbonyl, optionally substituted aminocarbonyl or carbamoyl,
  - ✓ L<sub>1</sub> and L<sub>2</sub> each represents hydrogen or together form -CH<sub>2</sub>-CH<sub>2</sub>-,
  - ✓ X<sub>1</sub>, attached at the 2 or 3 position of the aromatic ring, represents a bond, and in that case X<sub>2</sub> represents hydrogen, halogen, or alkyl, alkoxy, hydroxy, nitro, cyano or optionally substituted amino, or X<sub>1</sub> and X<sub>2</sub>, together with two adjacent carbon to which they are bonded in the 2, 3 or 4 position of the aromatic ring, form a (C<sub>4</sub>-C<sub>7</sub>)cycloalkyl group, wherein one or two -CH<sub>2</sub>- of the cycloalkyl ring are optionally replaced by oxygen or NH,
  - ✓ X<sub>3</sub> represents hydrogen, halogen, or alkyl, alkoxy, hydroxy, nitro, cyano or optionally substituted amino,
  - ✓ G represents a group selected from :

5

- 10

and medicinal products containing the same are useful as dual  $\alpha_2/5\text{-HT}_{2c}$  antagonist receptors.
